

Title: Recycle It!

Grade: K-2

Overview: Help take care of the environment! Students determine if trash is plastic, paper, metal, or glass then place it in the correct recycling bin. They also put food waste and clippings in the compost pile and haul away large recyclable items to clean up the scene.

My Learning Objectives:

Identify and sort items for recycling and for compost

DISCOVER MODE

Litter is scattered about each scene—bottles, papers, cans, lawn clippings, and more. Sort the trash into the correct bins to clean up each scene.

1. Click the Recycling Bin to advance to the Recycle It! Activity from the Main Room. The scene is filled with litter.
2. Click a piece of trash (it identifies itself) and drop it into a bin.
 - If correct, it stays there.
 - If incorrect, it pops back into the scene.
3. Continue to click and drop trash into the bins or the compost pile to learn how to sort trash for recycling. Click a large item, such as a washing machine, and a truck appears to take it away.
4. When all the trash has been removed and sorted, the sorted items transform, showing the items in each bin transforming into new items and the compost pile growing beautiful flowers.
5. Click the arrow button to go to a different background scene.
